How did the Fund perform during the reporting period?

Bond markets ended 2023 on a high note as investors' expectations for meaningful rate cuts in 2024 sent rates lower, fueling strong positive returns. Surprisingly strong economic data to begin 2024 tempered those expectations and sent rates back to near cycle highs. The 10-year treasury ultimately finished the first half of the year modestly higher, once again resulting in negative returns. The Fund maintained a modest long duration position relative to the Bloomberg Aggregate Index, the Fund's benchmark, resulting in a slight drag to performance in the first half of the year. As interest rates rose on the better-than-expected economic data, corporate credit spreads continued to tighten. As a result, the Fund's overweight position to corporate bonds was the largest contributor to performance, more than offsetting the headwind from duration. Within corporate bonds the Fund's emphasis on intermediate maturity bonds was an additional tailwind to performance as bonds in the intermediate part of the curve outperformed longer maturity bonds. Finally, sector allocation was additive to performance as the Fund maintains an overweight to financials, which outperformed their industrial and utility sector peers. We remain underweight Agency MBS, which continued to underperform during the first half of the year providing an additional tailwind to relative performance.
